FRONTO SLAT PANELS

FRONTO IS AN EXTERIOR
VERSION OF THE POPULAR
SLATS ON THE MARKET
TODAY.

FOR USE ON WALLS AND
CEILINGS. DEPENDING ON
THE PROJECT, THE PANELS
WILL WORK WELL ON THE
ENTIRE BUILDING OR AS A
SINGLE ACCENT ON THE
FAÇADE.

FRONTO CAN BE COMBINED
WITH OTHER VOX FAÇADE
PANELS SUCH AS INFRATOP,
VIFRONT AND MAX-3.

ADVANTAGES

Natural wood structure
and texture

Moisture resistance

System click

No painting and
maintenance required

Horizontal and
vertical installation

Walls and ceilings
application

Lightweight for easy
installation

Guarantee

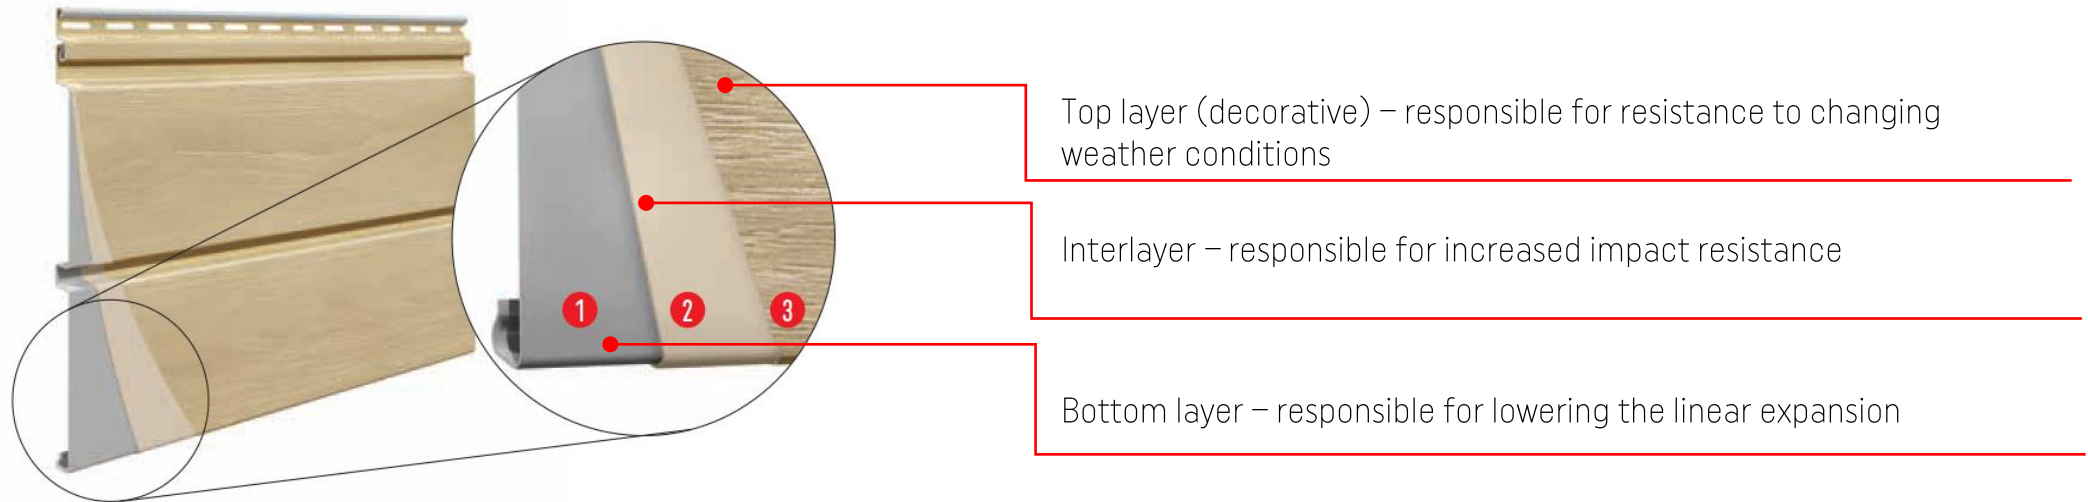

TECHNOLOGY

- Panels are offered in 2 variants: as a panel made in co-extrusion technology and in three-layer Max-3 technology
- The staining of the profiles in the colors of the wood was obtained thanks to the modern printing technology Termodruk and Termodruk 2.
- Designation: SVP(U)-06 for co-extruded panels and SXP(U)-06 for panels made in Max-3 technology

MAX-3 TECHNOLOGY

It is an innovative 3-layer extrusion technology.

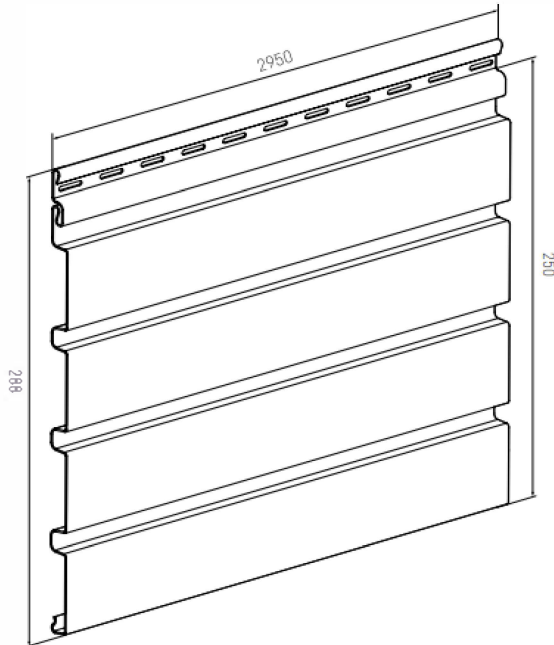

Thanks to this technology, the panel has exceptional impact resistance comparable to metal panels. Compared to standard vinyl cladding, the impact resistance is three times higher and withstands an impact force of 13.5 J. In addition, the panel has high resistance to low and high temperatures.

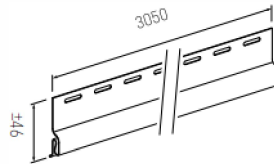

SYSTEM ELEMENTS

SV(P/PU)/SX(P/PU)-06

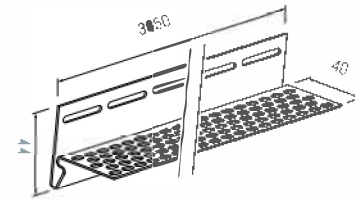

Slat panel

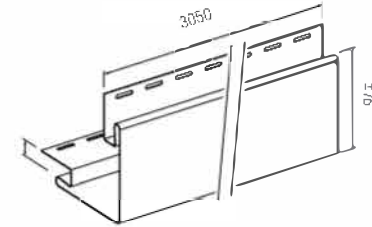

SV-11
Starting trim

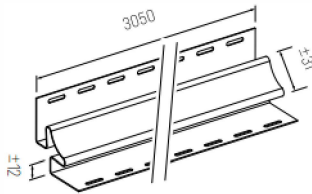

SV-11,5
Lower ventilation trim

SV(P/PU)-18
Joint trim

PANEL SHAPE

The panel has 4 narrow slats and grouts which refracts light and creates interesting contrasts.

MODERN SOLUTIONS

COLOURS

The colours of SVP(U)-06 and SXP(U)-06 panels correspond to the colours of panels and trims offered in Infratop and Max-3 systems

Oak

Honey Oak

Winchester Oak

Golden Oak

Walnut

INSTALLATION

- The shape of the panel allows for both vertical and horizontal mounting
- The panels are mounted on a standard substructure (metal or wooden) without the need for special tools.
- Finishing strips identical to Infratop and Max-3 systems
- Slat panels mean clean installation with no dust during processing.
- The click system and pre-punched mounting holes streamline their connection, which greatly reduces installation time, outperforming plaster and wooden façades.
